

CompliBot — Compliance Automation Robot

CompliBot ek AI-powered tool hai jo trading companies ke liye compliance filing automate karta hai. Ye ek trade description leta hai, Google Gemini AI se analyze karwata hai ki kaunsa financial regulation lagu hota hai (Dodd-Frank Act, MiFID II, ya EMIR), aur ek human approval step ke baad filing record save kar deta hai.

Features

- 🧠 AI-based reasoning (keyword matching nahi) using Google Gemini
- ✅ Human-in-the-loop approval before any filing is submitted
- 📄 Automatic filing log with unique Filing IDs
- 🎨 Colorful web interface (via Streamlit) alongside a simple command-line version

Files

- `app.py` — Command-line version of CompliBot

- `compli_web.py` — Web interface version (Streamlit) with colorful UI
- `filing_log.txt` — Auto-generated log of all filings (created when you run the app)

Setup

1. Install dependencies:

```
pip install google-generativeai  
streamlit
```

2. Get a free Gemini API key from [Google AI Studio](#)
3. Open `app.py` or `compli_web.py` and replace `YOUR_API_KEY_HERE` with your actual API key

Usage

Command-line version:

```
python app.py
```

Web interface version:

```
streamlit run compli_web.py
```

How It Works

1. User types a trade description (e.g. "US client bought a derivative from a European bank")
2. Gemini AI analyzes it and suggests the applicable regulation with reasoning
3. A unique Filing ID is generated
4. The human user reviews and approves/rejects the filing
5. The result is saved to `filing_log.txt`

This human-in-the-loop design ensures AI suggestions are always verified by a person before being finalized — important for compliance-sensitive workflows.
